

## **Job Description: Python Developer**

We are seeking a Python Django Developer to build, scale, and maintain robust backend systems and APIs.

### **Tech Stack**

- Python
- Django & Django REST Framework, Fast-API, Flask
- PostgreSQL, MongoDB
- Redis (cache & message broker)
- Celery (workers & scheduled tasks)
- Docker & Docker Compose

### **Key Responsibilities**

- Develop and maintain RESTful APIs using Django
- Design efficient database schemas and optimize queries
- Implement background processing and scheduled jobs using Celery
- Leverage Redis for caching and asynchronous workflows
- Containerize and manage applications using Docker
- Collaborate with frontend, DevOps, and product teams

### **Requirements**

- Strong hands-on experience with Python and Django
- Solid understanding of REST APIs and backend architecture
- Experience with PostgreSQL and performance optimisation
- Practical knowledge of Redis and Celery
- Experience with Docker-based development and deployments
- Ability to write clean, maintainable, and scalable code
